PROFESSIONAL SUMMARY

Full-Stack Engineer with 6+ years of experience building scalable products across fintech, logistics, and e-commerce fulfillment. I like proposing and leading projects end-to-end, from technical design through delivery, and communicating clearly with stakeholders across engineering and the business. I care about building and improving systems that people actually use, and I'm always looking for ways to do things better, staying open to feedback along the way.

EXPERIENCE

Full-Stack Engineer

May 2025 – Present

Keep Technologies · Remote

- Led end-to-end automation of a manual third-party credit-report request process that consumed around 120 hours/month across the Underwriting team; replaced manual portal downloads with a scheduled SFTP pipeline that auto-requests, retrieves, and processes reports — taking the process from 100% manual to 0%
- Architected a co-branded portal system (dual auth, subdomain routing, cookie/session management, dynamic theming) as a reusable foundation for partner-branded experiences — flagged internally as the most promising go-to-market revenue initiative
- Built a unified authentication server (NestJS + node-oidc-provider) powering login for both the web and mobile (React Native) apps, supporting 10,000+ logins per day
- Designed a legal-entity structure module supporting recursive business-ownership hierarchies (companies owning companies), an access-blocking system, and automated compliance reminders; later extended blocking to support multiple data sources without disrupting existing processes
- Built a partner-referral attribution system to track referred customers end-to-end, supporting 50+ partners simultaneously, enabling partner-specific plans and historical reporting

Cloud Engineer / Full-Stack Developer

Sep 2023 – May 2025

Melonn SAS · Remote

- Led the redesign of the warehouse system's data model into a flexible hierarchical structure that accurately represented the business domain, with an inventory service to track stock across every level
- This shift took the operations team from manually processing products one by one during receiving and dispatch from hours to seconds — improving receiving speed by roughly 70–150%, depending on batch size
- Integrated the OpenAI (ChatGPT) API into the warehouse app to automatically verify user-entered codes as part of the receiving workflow, cutting down manual verification steps

Full-Stack Developer

Mar 2022 – Sep 2023

Prevalentware SAS · Remote (Outsourcing)

- Built a company-wide internal time-tracking tool, adopted across the entire company to enable accurate client billing
- Led a healthcare-domain workflow automation project (Decisions no-code platform) for a U.S.-based client over 5 months — owning technical design, implementation, and direct client communication
- Developed stock control and reporting features for hardware/retail inventory management clients

Freelance – Full-Stack Developer

Oct 2020 – Dec 2021

Truckload Management Platform

- Developed frontend with ReactJS and Bootstrap, built backend with PHP and SQL, optimized MySQL databases, managed projects, and collaborated with clients and stakeholders

EDUCATION

Systems Engineer

Feb 2017 – Dec 2021

Universidad del Norte · Barranquilla, Colombia

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, Express, NestJS, React, React Native, Next.js, GraphQL, tRPC, PHP, Python, Java

Frontend: HTML, CSS, Tailwind CSS, Bootstrap, Chakra UI, Zod, Apollo Client, React Hook Form, Storybook

Backend & Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM, Sequelize ORM, REST APIs, node-oidc-provider (OIDC/Auth), Redis, RabbitMQ

Cloud & Infrastructure: AWS (Lambda, S3, ECS, AppConfig), Docker, Serverless Architecture, SFTP integrations, Monorepo/Turborepo package extraction, Temporal (workflow orchestration), Statsig (feature flags)

Testing: Jest, Cypress, end-to-end and integration testing

Analytics & Observability: Datadog, Sentry, Amplitude, Segment, LogRocket, Metabase, Snowflake

Tooling & Integrations: GitHub Actions, HubSpot (webhooks), Hightouch, Courier, Git, Decisions (no-code platform)

AI-Assisted Development: MCP (Model Context Protocol), Claude Code, Claude Design, Codex, Cursor (AI coding agents), connectors, plugins, SKILL.md authoring

AI/ML Integration: OpenAI API (ChatGPT) integration for user-facing verification workflows

Languages: Spanish (native), English (Professional Proficiency)
